Library is oligo-dT primed and directionally cloned (Ecore Site is destroyed upon cloning). Average insert size 1.8 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            which is located on chromosome 5931 (12). The gene has two different alleles, and it has been shown that the presence of two copies of the T allele leads to higher expression of the gene. This is because the polymorphism is found in the 5' leader sequence, which encodes a peptide which regulates expression of the beta2AR gene. The polymorphism is thought to affect individuals' responses to beta-agonists and beta-antagonists, and is likely to influence their predisposition to asthma, hypertension, congestive heart failure, ischemic heart disease, arrhythmia, obesity, diabetes, vascular disease, premature labour, migralne, anaphylaxis and chronic obstructive pulmonary disease (COPD).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polymorphisms in the leader cistron (LC) of the beta 2-adrenergic receptor (beta 2 AR), useful for predicting genetic disposition to a disease modified by beta 2 AR expression e.g. congestive heart failure.

This sequence represents the human beta2-adrenergic receptor gene, and is amplified by the primers of the invention. The primers are non-self hybridising; contain at least 15 nucleotides (nt) and has a melting temperature 50-85 deg. C. Each pair of primers is: non-cross-hybridising; anneals to two distinct segments (separated by at least 400 nt); and generates a homogeneous population of gene segments in a polymerase chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease modified by beta 2 AR expression e.g. congestive heart failure,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 60 BP; 6 A; 24 C; 21 G; 9 T; 0 other;

The gene can, therefore, be used to predict the susceptibility of an individual to these diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence, which encodes a peptide which regulates expression of the beta2AR gene. The polymorphism is thought to affect individuals' beta2AR genes to beta-agonists and beta-antagonists, and is likely to influence their predisposition to asthma, hypertension,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a fragment of the T allele of the human beta2 adrenergic receptor (beta2AR) gene, which is located on chromosome 5q31 (12). The gene has two different alleles, and it has been shown that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Figure 2; 56pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      alphalB gene are associated with cardiovascular disease, hypertension and prostratic disease (hypertrophy), and those in the beta2 gene with cardiovascular disease, hypertension and asthma, but variations may also be associated with peripheral vascular, pulmonary, neuropsychic and endocrine-metabolic disorders. These primers allow rapid and specific amplification of large and homogeneous gene segments of the alphalB and beta2 genes from a complex mixture of DNAs. This makes possible detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence complementary to a template sequence in a DNA polymerase reaction. The primers are used to amplify segments of the alphalB and beta2 adrenzygic receptor genes, particularly to identify genetic variations for diagnosis of disease. Specifically variations in the
              The invention relates to a novel method of assessing the cardiovascular status in an individual and to newly identified polymorphisms in the genes encoding angiotensin-converting enzyme (ACE), angiotensin II receptor type 1 (ATI) and type 2 (AT2), angiotensinogen (AGT), renin, aldosterone synthase, endothelin receptor type A and beta-adrenergic receptors 1 and 2. The method comprises determining the sequence at one or more polymorphic positions within these genes, and comparing the pattern of polymorphisms from the individual with a reference polymorphic pattern of polymorphisms from the individual with a reference polymorphic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAA38340;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2300 BP; 495 A; 613 C; 646 G; 546 T; 0 other;

CC primers and probes for detecting a polymorphic site may be used as comprising an oblymorphic site may be used as comprisers and probes for detecting genetic polymorphisms or in molecular clibrary arrays for high throughput screening. The genes, and the proteins they encode are useful in the screening of potential cardiovascular cardiovascular in individual's polymorphic pattern reduces or climinates trial and error in selecting a treatment for a particular cardiovascular patient. It also provides the ability to celiminate patients from clinical trials who are predicted to be con-responsive, or at a risk for an adverse resounce, to a particular creatment regimen. Adverse results in an early trial can be evaluated to identify polymorphic patterns so that the adverse results can be correlated with a sub-population of that the adverse results can be exclusion of such sub-populations from the treatment group. Beneficial cardiag can be approved for use in the appropriate population, thereby concerns the number of patients required for a clinical trial, which in turn decreases the duration and cost of such trials. The present conditions from the treatment group is the number of patients required for a clinical trial, which in the conditions of the cost of such trials. The present conditions from the treatment group is the identified to the conditions of the cost of such trials. The present conditions are presents the human beta-adrenery creceptor-2 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

The polymorphic markers are useful for determining the predisposition of an individual to cardiovascular disorders such as myocardial infarction, unstable angina, hypertension, atherosclerosis and stroke. They are also useful for predicting the likely cardiovascular status of a patient given a treatment regimen comprising administration of cardiovascular drugs (e.g., ACE inhibitors, beta-adrenergic receptor antagonists (beta-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   blockers) or calcium channel blockers). One or more polymorphic markers provides a basis for predicting the outcome of a treatment regimen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Beta 2-adrenergic receptor; human; hypotensive; cardiant; stroke; neuroprotector; immunosuppressor; predisposition; high blood pressure; cardiovascular disease; myccardial infarction; anxiety; depression; neuropsychiatric disease; attention deficit disorder; hyperactivity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2305 BP; 495 A; 616 C; 649 G;

to develop therapeutics and/or lifestyle drugs. Individual specific bets 2-receptor agonists can be developed. Treatments can be optimized for individuals, including gene therapy and pharmaceutical intervention therapy. This sequence represents a variant of the wild type human beta 2-adrenergic receptor gene which is represented in AAZ00773.
